

CHANGING “WHAT IF” TO “WHAT IS”

A new approach for the diabetes dilemma

In this session we shared that ...

- **One in four** people with diabetes admitted to cutting back on their prescribed dosage – because of cost.¹
- The Patient Assurance Program will reduce out-of-pocket costs by **40% or more** when it launches in 2020.

...what if we could change the trajectory of this dilemma?

- By increasing **patient access**, adopting **innovative models**, and **looking to the future**, we can promote change.
- The Patient Assurance Program will cap insulin copays at \$25, providing **greater affordability and predictability** to diabetes members.

WHAT'S NEXT?

Stay connected with your Express Scripts account team for more information on how the Patient Assurance Program can improve affordability and copay predictability for your diabetes population.

CONSIDER THIS

Future technologies could hold the key in tackling the diabetes dilemma. With new tools to help diabetic patients monitor blood sugar and the potential for genetic testing in this space, we could be turning a corner treating this challenging condition.
